What's New in the Guidelines

Updates to the Guidelines for the Prevention and Treatment of Opportunistic Infections in HIV-Infected Adults and Adolescents

The Guidelines for the Prevention and Treatment of Opportunistic Infections in HIV Infected Adults and Adolescents document was published in an electronic format that could be easily updated as relevant changes in prevention and treatment recommendations occur.

The editors and subject matter experts are committed to timely changes in this document because so many health care providers, patients, and policy experts rely on this source for vital clinical information.

All changes are developed by the subject matter groups listed in the document (changes in group composition are also promptly posted). These changes are reviewed by the editors and by relevant outside reviewers before the document is altered.

Major revisions within the last 6 months are as follows:

April 16, 2015:

1. **Hepatitis B Virus:** There is new information on techniques to evaluate the stage of liver fibrosis. New data on HBV immunization regimens is included in recommendations regarding the choice of the optimal immunization regimen. There are also new recommendations regarding the duration of anti HBV therapy following initiation of ART.
